

bThere

Copyright © grito2003, S.L.

 is a technology developed by gritonet allowing a totally innovative server management. You have never been so close to your server.

 allows you to:

- Power on, power off and reset the server even when it is in a non-responsive state (hanged)
- Access over IP to keyboard, vga and mouse (KVMoIP)
- Complete management over VPN
- Automatic OS recovery

The following are example situations where is extremely useful:

Problem	Solution	
	Without bThere	With bThere
Server hangs	Contact technical service and wait... make yourself comfortable	Reboot it in a few seconds using gritonet control panel
OS Network disabled	Contact technical service and wait... make yourself comfortable	Connect to the remote console (KVMoIP) through the gritonet panel and enable it again
Network misconfigured	Contact technical service and wait... make yourself comfortable	Connect to the remote console (KVMoIP) through the gritonet panel and reconfigure it
BIOS Changes	Contact technical service and wait... make yourself comfortable	Do it directly through the remote console (KVMoIP)
OS Reinstall	Contact technical service and wait... make yourself comfortable	Manage the reinstall yourself with the gritonet control panel
Secure server access	Get a firewall... and pay for it	Get connected to the VPN
Server attacked	Try to stop the attack disabling the network and... ¿how will you access the server again?	Disable public network and manage the solution through the console (KVMoIP) on the gritonet panel
